

Whether you want to comply with the regulations of an Islamic country, translate your channel into 15 different languages, version your programme for an American audience, or ingest, edit and transcode for playout, TVT builds your channels for a global audience.

Position: Network Engineer

Location: West London

This is an exciting opportunity to become involved in the operation, continued growth and development of a state-of –the-art post house facility. As a Network Engineer you will play a vital role in ensuring the overall success of the business. Reporting to the Senior Engineer you will be part of the team responsible for the maintenance and development of the company’s technical facilities.

Responsibilities

- Install, configure and maintain both Windows and MAC based servers.
- Building and maintaining complex IP networks and firewalls.
- Managing the day-to-day security requirements of the company.
- Optimising network performance for media streaming, editing and file delivery.

Knowledge and Experience

- Good knowledge of Linux based systems
- Minimum LPIC 2/RHCE status
- Excellent knowledge of IP Tables/Packet Filtering
- Experience of HP Procurve switches
- Ability to work with Mac OS 10.6 and Windows XP would be an advantage
- A knowledge of the effects of media streaming and editing on network bandwidth and performance

Personal Skills

- Excellent communicator
- Strong team player
- Good analytical skills with a structured approach to work

If you would like to be part of a dynamic team within a pioneering post-production/broadcast environment and are available for an immediate start please apply with a C.V. and cover letter to jobs@tvt.biz
